## Summary

---

I am a full-stack software engineer. I've designed, coded, tested, and documented software for many years. I've created proprietary UI, database, and other frameworks. I've trained many developers on technologies and problem solving strategies. I've managed small and medium (10+) teams of developers, including offshore. And I've been a small business owner in the IT field.

I am currently focused largely on web based UIs with a focus on the now dominant React framework as well as HTMX. But I also have unusual skills in VR, artificial intelligence, data mining, 2D/3D graphics, visual arts, and more.
